SURFACING BENEFITS INCLUDE:

- Selection of colours available
- Natural appearance
- Fully porous and fast draining
- Ideal for replacing existing grass or soil
- Virtually maintenance free

COMMON USES INCLUDE:

- Play area safety surfacing
- Pathways and rural areas
- Decorative landscaping

OTHER FEATURES INCLUDE:

- Other mixed colour options available upon request
- Certified to EN1177

Colour Option
Examples

- Red, Green & Beige

- Other mixed colour

Rubber mulch safety surfacing is commonly found in playgrounds and outdoor play spaces. It is manufactured from recycled materials that are shredded to appear like wood bark chippings. These rubber shreds are then bonded together with a polyurethane resin. When installed creates a seamless natural looking playground floor with no loose particles. Perfect for rural locations, seating areas and pathways due to its natural appearance.

* Note: Sample pictures are for reference only and that colour laid may vary due to batch variation, supplier variation and environmental factors. Some colours subject to fade over time from exposure to UV light.

- Safety surfaces may require to be laid at various depths depending upon the CFH of the equipment it is installed beneath.
- Rubber mulch safety surface does not necessarily require an engineered base but it is recommended. The most common of these being type 1 MOT stone.
